

# Front-end assignment

---

Please build the following light box using any JavaScript you want (native, jQuery, etc)

The files structure has been defined and is attached

Assumptions

1. The light box should be positioned in the centre of the page (both vertical and horizontal) and have a light grey opacity behind
2. The progress bar should start at 0 and finish at 100
3. The speed of the animation should be retrieved from data.json in the js file and loaded via AJAX
4. The progress bar animation should start on window load after data retrieved from data.json
5. There should be a reset function on the main page
6. This needs to be IE8 + compliant

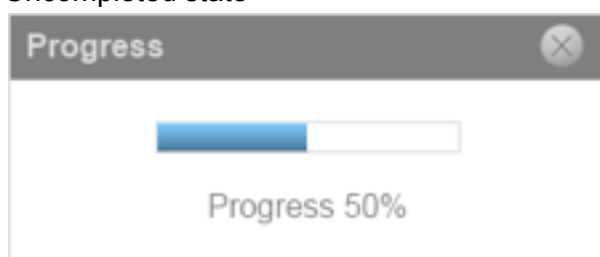

Nice to have

Ensure this all works on a mobile using a responsive approach

Design

Please ensure the design of the progress bar is as close to the following

Uncompleted state
